

Claims:

What is claimed is:

- Sub B2
1. A method for transmitting user identification data to a wireless communication device (1), in which method said user data are stored in a user data identification module (2), wherein in connection with starting up of the wireless communication device (1), the user data stored in said user data identification module (2) are examined to find out the access rights of the user of the wireless communication device (1), **characterized** in that the user data are transmitted at least partly in a wireless manner from the user data identification module (2) to the wireless communication device (1).
2. The method according to claim 1, **characterized** in that the user data stored in said user data identification module (2) are used in connection with at least a first (1) and a second wireless communication device (1') to find out the access rights of the user.
3. The method according to claim 2, **characterized** in that the identification module (2) is placed in the first wireless communication device (1), wherein to find out the access rights of the user, the identification module (2) placed in said first wireless communication device (1) is used in the second wireless communication device (1').
4. The method according to claim 1, ~~2 or 3~~, **characterized** in that for the transmission of user data, radio-frequency signals are used.
5. A user data identification module (2) which comprises means (9) for storing user data and means (4, 6) for transmission of user data to a wireless communication device (1), the wireless communication device (1) comprising means (5) for receiving user data and means (11) for examining the user data to find out the access rights of the user of the wireless communication device (1), **characterized** in that said means (4) for transmitting user data comprise wireless communication means.
6. The user data identification module (2) according to claim 5, **characterized** in that it is intended to be used in connection with at least a first wireless communication device (1) and a second wireless communication device (1') to find out the access rights of the user.
- Sub B3
- Sub B4

By conc  
5 7. The user data identification module (2) according to claim 6, **characterized** in that it is placed in the first wireless communication device (1), wherein said identification module (2) placed in the first wireless communication device (1) is arranged to be used for finding out the access rights of the user in the second wireless communication device (1).

Sub B7 a  
10 8. The user data identification module (2) according to claim 5, ~~6, or 7,~~ **characterized** in that the means (4) for transmitting user data comprise means (RX, TX) for transmitting and receiving low power radio frequency signals.

a  
15 9. The user data identification module (2) according to ~~any of the~~ <sup>claim 5</sup> ~~claims 5 to 8,~~ **characterized** in that it is arranged to be portable with the user, preferably to be attached to the wrist.

Sub B7 a  
20 10. A wireless communication device (1) which comprises means (5) for receiving user data stored in a user data identification module (2) and means (11) for examining the user data to find out the access rights of the user of the wireless communication device (1), **characterized** in that said means (5) for receiving user data comprise wireless communication means.

25 11. The wireless communication device (1) according to claim 10, **characterized** in that it is a GSM mobile station.

Sub B7 a  
30 12. The wireless communication device (1) according to claim 10 ~~or 11,~~ **characterized** in that it comprises means (11) for setting the access rights for the wireless communication device, wherein the access rights (1) for the wireless communication device (1) are arranged to be limited, if the user data are not received from the identification module (2) in the wireless communication device (1).
